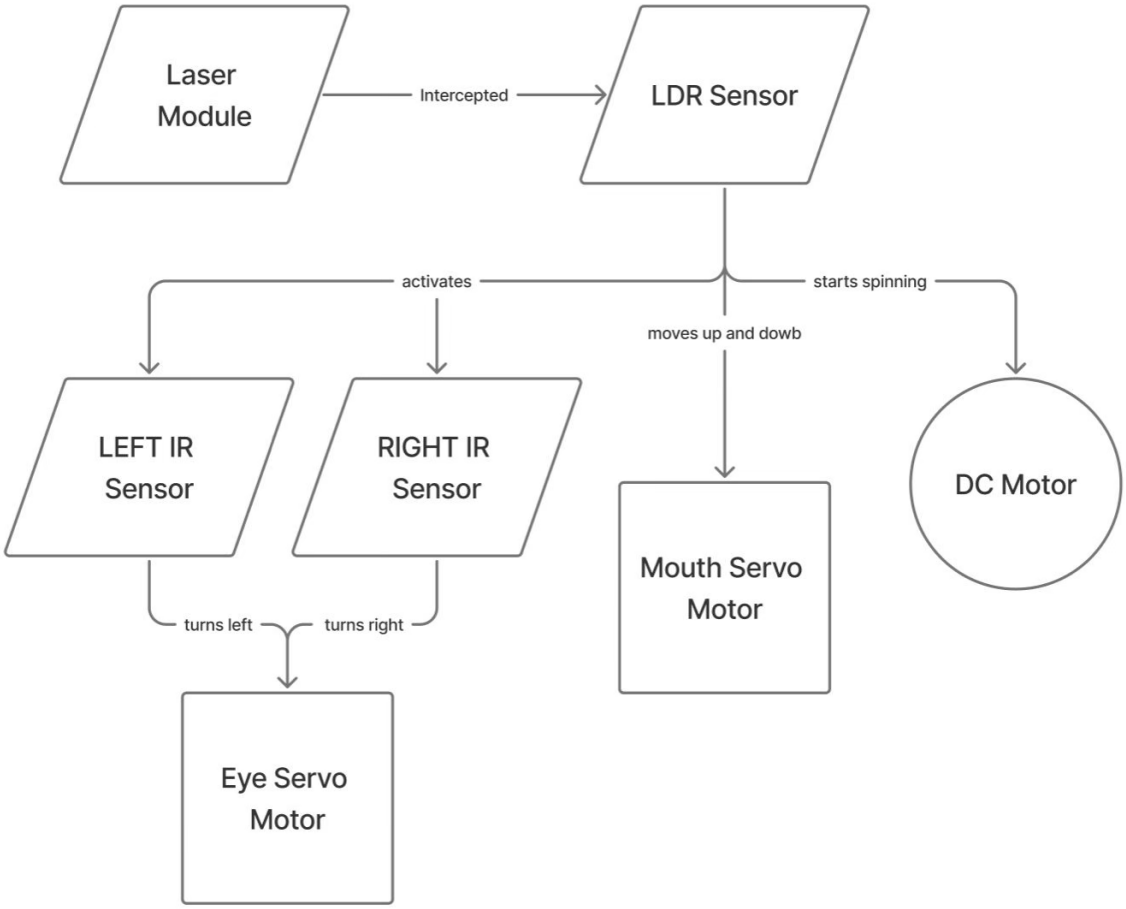
Electronics Documentation

1. Electronics Block Diagram



2. Components Table

Component	Quantity	Purpose	Justification
Servo Motor	*2*	*To move the eyes* *To move the mouth*	*Smooth movement is required tomato the narrator feel more realistic*
IR sensor	*2*	*To detect the user*	*It moves the eyes according where the user is (ie which IR sensor is activated)*
DC Motor	*1*	*To move the automata*	*Continuous, uniform movement is required*
Laser Module	*1*	*Shoots beam at LDR sensor and keeps it activated*	*The LDR sensor will be placed in a dark box and needs to have a constant light source to remain*
LDR Sensor	*1*	*Starts the automation*	*The user blocks the path of the Laser, triggering off the LDR sensor which causes the automation to start*
